

Evaluation regimes (Methods 2.2)

R0: random pairs

Example test pair

Protein reuse is allowed;
novelty is not constrained.

R1: seen-seen

Example test pair

Both test endpoints occur
in training; the pair is new.

R2: one unseen

Example test pair

Exactly one test endpoint
is absent from training.

R3: both unseen

Example test pair

Both test endpoints are
absent from training.

R3: cluster-controlled

Example test pair

Both test endpoints and
their assigned clusters
are absent from training.

Green: observed in training • Orange: absent from training • Gray: unconstrained • Dashed outline: assigned sequence cluster
